

Cardiac Science AED's at Richmond Arenas

The City of Richmond, and Arena Services have equipped all three Richmond Areas with Automatic External Defibrillators (AED's). These devices are very easy to use, and contain voice commands to help the user. Team safety personnel and coaches should make themselves familiar with their location and use. More information can be found at <http://www.cardiacscience.com> or Youtube has several good training videos.

In the event of a suspected cardiac arrest, the AED units can be used either by the public or arena staff. Follow these steps:

- Assign someone to call 911 and ask for both Fire-Rescue and Ambulance. Caller must explain that there is a suspected cardiac arrest and gives the exact location.
- Remove AED unit from cabinet. Alarm will sound once the cabinet door is opened to alert facility staff. Assign someone to wait by the AED cabinet in order to advise facility staff of the emergency. Take AED to site of the emergency.
- Assign someone at the scene to go to the facility's main entrance to meet both Fire-Rescue and Ambulance in order to them with directions to the emergency location.
- Open AED unit at the scene and follow visual and voice prompts. Unit will guide user through CPR.
- Continue to follow prompts until Fire-Rescue or Ambulance personnel take over.

Arena	AED Location
Richmond Ice Center	At each of the South facing entrances. This facility has 3 AED units
